

Add Overlay Ticker dialog box

2. In box labeled **Ticker Symbol**, enter the symbol for the overlay ticker you wish to display.
3. Click **OK**. An overlay chart will be drawn in the colors that are specified for overlays in the *Chart Colors* section of the *Properties* dialog box.
4. To remove the overlay ticker from the chart, click the second from right button on toolbar (*Remove Overlay Ticker*).

Chart spacing reduced for more data display

The minimum plot spacing (horizontal time scale) has been reduced to a value of 1. This change allows you to display more data on real-time charts. The minimum spacing is particularly useful when you are viewing real-time charts with 1 or 2 minute price bars.

â To change the horizontal chart spacing:

1. Open the **Properties** dialog box by right clicking on the chart and selecting **Properties** from the pop-up menu. Or, select **Chart Properties** from the **File** menu.
2. In the **Plot Spacing** section of this dialog box, use the arrows to change the spacing value. The range is 1 to 10.
